The Laplace transformation is an important part of control system engineering. To study or analyze a control system, we have to carry out the Laplace transform of the different functions (function of time). Inverse Laplace is also an essential tool in finding out the function  $f(t)$  from its Laplace form.

Analysis ● Laplace transforms is a mathematical operation that is used to “transform” a variable (such as x, or y, or z, or t) to a parameter (s).

Mathematically, it can be expressed as:  
$$L[f(t)] = \int_0^{\infty} f(t) e^{-st} dt$$

Laplace transform, in mathematics, a particular integral transform invented by the French mathematician Pierre-Simon Laplace (1749–1827), and systematically developed by the British physicist Oliver Heaviside (1850–1925), to simplify the solution of many differential equations that describe physical processes.
