A guide to understanding the masks currently used in dentistry

The surgeon enters the brain at the base of the skull and relieves the compression. The nerve is wrapped in a Teflon-like material and the opening to the skull is closed. Ablative (damaging the nerve) Several procedures can be done to stop the transmission of pain signals to the brain.

PATIENT GUIDE

“The important thing in dentistry is for the dentist and patient to work like a team and for the patient to take ownership of self-care.” She adds that a little empathy can go a long way with patients who have had bad experiences in the past, many of who are fearful and distrustful.

Meeting the Needs of Difficult Dental Patients

The Basic Periodontal Examination (BPE) is used as a basic screening method to check the periodontal status of a patient. It is a simple procedure and should be done on all patients to quickly identify any particular periodontal issues. Which instrument do I use? The instrument used for the examination is a CPITN Probe (also known as a WHO probe).

Basic Periodontal Examination (BPE) - dentalnotebook

Dentists use specialized instruments to gently remove these deposits without causing harm to the teeth. All dental instruments are put through a stringent cleaning, disinfecting, and sterilizing procedure to ensure safety and quality control. A dental mirror will also be used to help the dentist inspect hard-to-see areas in the mouth.

The Dentist's Guide to a Basic Teeth Cleaning

Dentists measure this distance in millimeters. As a patient, you want to hear a smaller number. That means that you have a smaller gap between the tooth and gum, a sign of a healthy mouth. A larger number indicates that you have gum issues such as plaque and tartar buildup.
