Petroleum geochemistry is a branch of geochemistry and studies the application of chemical principles to the study of the origin, generation, migration, accumulation and alteration of petroleum, and the use of this knowledge in exploration and production of oil and gas.

### Petroleum Geochemistry

petroleum-generating capacity of the source rock. Petroleum geochemistry is improving the efficiency of exploration and production through characterization of the elements and processes that control the richness and distribution of petroleum source rocks, thus providing valuable input for basin and petroleum system modeling.

### Basic Petroleum Geochemistry for Source Rock Evaluation

Petroleum geochemistry is a relatively young science, tracing its roots back to the 1934 discovery of chlorophyll-like structures in crude oil by Albert Treibs (1934).
