The diesel engine, named after Rudolf Diesel, is an internal combustion engine in which ignition of the fuel is caused by the elevated temperature of the air in the cylinder due to the mechanical compression; thus, the diesel engine is a so-called compression-ignition engine (CI engine). This contrasts with engines using spark plug-ignition of the air-fuel mixture, such as a petrol engine ...

A steam locomotive is a type of railway locomotive that produces its pulling power through a steam engine. These locomotives are fuelled by burning combustible material – usually coal, wood, or oil – to produce steam in a boiler. In most engines, the steam moves reciprocating pistons which are mechanically connected to the locomotive's main wheels. . Fuel and water supplies are usually ...

The drawings correspond very closely to the real engine above. Unfortunately the detail is not very clear, but it looks as though the LP cylinder is double-acting, whereas all the HP cylinders are clearly single-acting. The crank angles do not correspond with those of the Deutz engine above, where the HP pistons go in and out together. Here the ...

The VW "Type 4" engine was originally made for the VW 411/412 (1.7 liters). The 912E uses a Porsche-designed revision of the engine (2.0 liters) with a longer 71mm stroke crankshaft, new rod bearings and new pistons to increase the cylinder bore to 94mm. The 912E's Bosch L-Jetronic / Air Flow Controlled system was later adapted for the 911. The ...

A steam turbine is a device that extracts thermal energy from pressurized steam and uses it to do mechanical work on a rotating output shaft. Its modern manifestation was invented by Charles Parsons in 1884.. The steam turbine is a form of heat engine that derives much of its improvement in thermodynamic efficiency from the use of multiple stages in the expansion of the steam, which results in ...
